

A top-down view of a workspace on a light teal surface. In the top left, a silver laptop is partially visible with its black keyboard and trackpad. To its right is a white computer mouse. Above the mouse is a white cup with dark coffee. In the bottom left, there is a dark brown leather notebook with orange stitching and a white pen. Next to the notebook are a pair of tortoiseshell-rimmed glasses.

Understanding Stakeholders in AI Solutions

What are Stakeholders?

- A Stakeholder is a person or group who:
 - Is affected by a problem
 - Has an interest in the solution
 - May benefit from the solution
- Stakeholders are identified during Problem Scoping.

Why Are Stakeholders Important?

- Help us understand the real problem
- Provide useful information
- Help design better AI solutions
- Ensure the solution benefits the right people

If we ignore stakeholders, the solution may fail.

Types of Stakeholders

There are mainly two types:

- **Primary Stakeholders**
- **Secondary Stakeholders**

Primary Stakeholders

Primary stakeholders are:

- Directly affected by the problem
- Directly benefit from the solution
- **Examples:**
 - Students (in attendance problem),
 - Patients (in hospital waiting time issue),
 - Customers (in delivery delay problem)

Secondary Stakeholders

- **Secondary stakeholders are:**
 - Indirectly affected
 - Support or manage the system
- **Examples:**
 - Teachers
 - Parents
 - School management
 - Delivery staff

Example 1 – Mobile Phone Usage Case

- Problem:
 - Excessive Mobile Phone Usage
 - Primary Stakeholders: Students
 - Secondary Stakeholders: Parents, Teachers

Example 2 – Plastic Waste in School

- Problem:
 - Plastic Waste
 - Primary Stakeholders: Students, Teachers
 - Secondary Stakeholders: Cleaning staff, School management

Stakeholders & 4Ws Connection

In 4Ws Canvas:

- WHO → Identifies Stakeholders

Without identifying stakeholders,
we cannot clearly define the problem.

WHO?

WHAT?

WHERE?

WHY?

Activity – Identify the Stakeholders

- Problem:
 - Long queues in school canteen
 - Students identify: Primary Stakeholders, Secondary Stakeholders

Sample Answer – Canteen Case

- Primary Stakeholders: Students waiting in queue
- Secondary Stakeholders: Canteen staff, School management

Common Mistakes

- ✗ Ignoring indirect stakeholders
- ✗ Including unrelated people
- ✗ Confusing stakeholders with solution providers

Key Takeaways

- ✓ Stakeholders are people affected by a problem.
- ✓ They are identified in the Problem Scoping stage.
- ✓ There are primary and secondary stakeholders.
- ✓ Identifying stakeholders helps create effective AI solutions.

A top-down view of a desk with a light blue background. In the top left, a portion of a silver laptop is visible. To its right is a white computer mouse. In the bottom left, there is a dark brown leather notebook with a white pen resting on it. A pair of tortoiseshell glasses is placed next to the notebook.
